DESCRIPTORS	*Educational Finance; Elementary Secondary Education; Employment Statistics; Enrollment; *Institutional Characteristics; National Surveys; *Profiles; *Public Education; School Districts; *School Statistics

ABSTRACT

This report presents compiled data summaries concerning public elementary and secondary education for all 50 states and the District of Columbia for 1982-83 and 1983-84. Further, state profiles exhibit the rank of each state for selected variables. State Education Agency administrative reports and records based on data from local agencies provide the statistics for the document. In addition to information encompassing the general categories of institutional, pupil, staff, and finance data, the report includes selected data from the 1980 Census of Population and Housing for a contextual guide. The selected characteristics profiled include the number of school districts; the number of schools; enrollment; attendance; the number of high school graduates; staff employment data; school district revenues; current expenditures; the revenue per pupil in average daily attendance from local, intermediate, state, and federal sources; the current expenditure per pupil for instructional, noninstructional, and support services; the number of officials or administrators per 100 employees; and the number of classroom teachers per 100 employees. Center for Education Statistics

"The purpose of the Center shall be to collect and disseminate statistics and other data related to education in the United States and in other nations. The Center shall . . . collect, collate, and from time to time, report full and complete statistics on the conditions of education in the United States; conduct and publish reports on specialized analyses of the meaning and significance of such statistics; . . . and review and report on education activities in foreign countries,"—Section 406 (b) of the General Education Provisions Act, as amended (20 U.S.C. 1221e–1).

June 1987

Foreword

This *Compendium* is the fifth in a series of compilations of institutional, pupil, staff, and finance data about local education agencies presented in summary and profile form. Unlike its predecessors, this report includes data for two years. The State summary shows the actual data reported for the LEA's in each State for both years, percent distributions for certain variables, and changes from one year to the next for a similar set of variables. The profiles show how each State ranks with respect to other States on each of the selected variables. The tables at the end of the report present the State rankings of each variable in a summary form to permit easy State-to-State comparisons. The *Compendium* is intended as a quick reference source for persons needing easily accessible information about elementary and secondary education in a particular State. Other Center for Education Statistics publications provide more detailed information about State public school systems.

We wish to acknowledge the considerable data processing support provided by Janet Swann.

Introduction

When the U.S. Office of Education was created by the Congress in 1867, it was given responsibility for gathering data about education in the United States. Its mandate was to "collect such statistics and facts as shall show the condition and progress of education in the several States and territories." In 1965 the Congress enacted legislation creating the National Center for Educational Statistics and vested responsibility for this function therein. The legislation that created the Center stated that its purpose shall be "to collect, to collate, and, from time to time, report full and complete statistics on the conditions of education in the United States. . . ." — Section 406(b) of the General Education Provisions Act, 20 U.S.C. 1221e-1—

This *Compendium* presents State aggregate statistics about public elementary and secondary education for school years 1982-83 and 1983-84 for each of the 50 States and the District of Columbia. Selected data from the 1980 Census of Population and Housing are also included to provide a context in which the education statistics can be interpreted more effectively. These data reflect the most frequent inquiries received from a wide variety of users and cover the basic facts about enrollments, staffing, and financing of public education.

The States are also ranked in a profile format to show how each State compares to the other States on each of the variables selected. These ranks must be interpreted with care, however. In some cases, a wide difference in ranks between two States may reflect only a small difference in the value of the variable while, on the other hand, a smaller difference in ranks may reflect a large difference in the value of the variable. For example, the range between the lowest and highest expenditure per pupil ratio is many times greater than the range between the lowest and highest pupil/teacher ratio. The same caveats also apply to changes in State rankings from one year to the next.

Data Sources

The education statistics contained in the *Compendium* were compiled from State Education Agency administrative records and reports. Each State agency obtains data from the local education agencies in the States that are used for administrative and other purposes. Data from these local agency reports are compiled by the State agencies into an agreed upon format and transmitted to the Center.

The data included reflect only that portion of public elementary and secondary education which is provided by local education agencies. Schools operated by the State education and other agencies are not included, nor are any data about the operations of such agencies included.

Data from the 1980 Census of Population and Housing were taken from the *City and County Data Book, 1983*, and "State Population Estimates, by Age and Components of Change: 1980 to 1984," *Current*

Population Reports, Population Estimates and Projections, Series P-25, No. 970, issued June 1985, published by the U.S. Bureau of the Census.

Comparability

Although many of the terms used to classify student, employee, and finance data are common to all of the States, the definitions of such terms may vary from State to State. Furthermore, each State education agency imposes its own recordkeeping, accounting, and reporting requirements on its local education agencies. Such requirements also vary from State to State.

This variation results in some lack of comparability among the States with respect to the more detailed aggregates. This lack of complete comparability must be kept in mind when comparisons are made among States.

For example, all States report current expenditures on a common basis. But, some States may include certain expenditures under Instructional Services that other States would include under Support Services. There are also variations in how days attended are counted and how the number of days in the school term is determined, hence average daily attendance among the States is not exactly comparable. Consequently, any ratio based on average daily attendance may vary from State to State.

Therefore, absolute comparisons among States on some of the characteristics included in this *Compendium* must be interpreted in view of this lack of comparability and inconsistent reporting.

Notes On Finance Data

In all States, local education agencies make current expenditures for instructional and other educational services. In some States, however, additional current expenditures are made for or on behalf of local education agencies by State and other agencies.

Current expenditures made for or on behalf of local education agencies by other agencies are made from revenues generated by these agencies, and such revenues are not reflected in the revenue totals reported for each State. Such expenditures include items such as textbooks purchased by a State and distributed to local education agencies at no cost to the locals and free student transportation services provided to locals in some States by a State agency.

These expenditures are a form of indirect State aid that does not show up in local agency revenues, which may result in lower local property tax rates, since the local agencies need not generate the revenues to support such expenditures. This type of indirect aid may also result in lower local agency revenue and expenditure per pupil ratios in such States when compared to other States in which such additional financing is not provided, because the amounts are not recorded as either revenues to nor expenditures made by the local agencies that receive the aid.

Methodology

Except for the 1980 Census data, all of the other data were obtained from State education agency records and reports. The State agencies obtained these data from their respective local education agencies and compiled their State aggregate data into a standard reporting format prescribed by the Center.

As the State reports were received they were edited for both internal and longitudinal consistency. Entries that failed various edit checks were referred back to the State agency for verification or correction. After the State agencies had verified or corrected the original entries, the data were used to prepare the State summaries and profiles that appear in the *Compendium*.

All of the ratios included in this report were computed by the Center. In cases where rounded data are reported, details may not add to totals because of the effects of rounding. In the case of revenue and expenditure ratios, the actual (not rounded) values were used to compute the ratios, which were then rounded to the nearest dollar.

The ratio for ''pupils per square mile'' and the ''pupil/teacher ratio'' were calculated using the ''fall membership'' figure for total enrollment.

Ranks shown on the profiles are presented in descending order, i.e., the State having the highest value for a variable is assigned the rank of 1; the State with the lowest value is assigned the rank of 51. For some variables, being ranked first is not always desirable. For example, having the highest percentage of families with incomes below the poverty line would not be considered by most observers to be a desirable condition. The table below illustrates the magnitude of the variation among the States and provides a better perspective in which the ranks can be compared. The value of each of the characteristics shown in the profiles is given for the 1st, 10th, 25th, 40th, and 51st ranks for 1982-83.

	Rank				
Characteristic	**1**	**10**	**25**	**40**	**51**
Percent urban population	100.0	83.8	67.9	54.0	33.8
Percent non-white population	72.6	24.0	12.2	5.2	0.9
Percent 5- to 17-year-olds	24.0	22.2	21.2	20.5	17.1
Percent 25 years old and older with 12 or more years schooling	82.5	73.7	67.9	62.4	53.1
Median family income	28,395	21,537	19,723	17,280	14,591
Percent families below poverty	18.7	13.1	8.9	7.5	5.8
Percent children under 18 years below poverty	30.4	20.6	14.3	11.9	7.7
Number of school districts	1,076	565	239	67	1
Number of schools	7,403	2,165	1,318	663	160
Fall membership	4,065,486	1,096,815	593,825	162,024	89,413
Average daily attendance (ADA)	4,042,996	1,032,030	556,115	149,696	79,827
Number of high school graduates	236,897	71,219	37,750	11,407	4,909
Pupils per square mile	1,493.5	39.7	15.6	4.7	0.2
Pupil/teacher ratio	24.1	20.2	18.0	16.1	14.8
Revenue per pupil in ADA	7,106	3,752	3,215	2,675	1,870
Current expenditure per pupil in ADA	7,235	3,445	2,901	2,458	1,849
Employee benefits per employee	7,594	5,475	3,278	2,543	1,484
Officials/administrators per 100 employees	9.7	5.4	4.7	4.1	3.3
Classroom teachers per 100 employees	87.4	58.7	54.7	51.9	44.9

Definition of Terms

Selected terms are defined in order of presentation in the compendium. Other terms that enjoy common usage are not included among these definitions.

Urban Population. The urban population is comprised of all persons living in places of 2,500 or more inhabitants and in urbanized areas, i.e., areas surrounding cities of 50,000 or more inhabitants that have a population density of 1,000 or more persons per square mile.

Non-White Population. Persons who identified themselves in the 1980 Census as belonging to the black, American Indian, Eskimo, Aleut, and Asian and Pacific Islander racial groups or other groups not otherwise classified.

Born in State. Persons born in the same State in which they resided when the 1980 Census was taken.

Years of School Completed. Completion of 12 or more years of school or of 16 or more years of school does not necessarily indicate that the person received any formal award such as a high school diploma or college degree.

Household. A person or group of persons living in a housing unit.

Family. Two or more persons, including the householder, who are related by birth, marriage, or adoption, and who live together as one household; all such persons are considered as members of one family.

School District. A minor civil division of the State that either operates schools for its resident school-age children or contracts with other school districts to provide educational services to its resident school-age children. Regional educational service agencies, found in some States, are not included in this count of school districts.

Fall Membership. The number of pupils on the official roll of local school districts as of October 1 of the school year or the nearest date thereto when the count is taken by the State.

Average Daily Attendance. The aggregate number of days attended divided by the number of days in the school year. This includes the full-time equivalent ADA for summer sessions.

High School Graduates. The number of persons completing high school graduation requirements in regular day school programs operated by local education agencies who were awarded high school diplomas during the school year. This does not include persons receiving high school diplomas from other programs or high school equivalency certificates.

Instructional Staff. The full-time equivalent number of persons providing direct instruction to pupils, i.e., classroom teachers and instructional aides.

Support Staff. The full-time equivalent number of other employees of public school districts including both certified and non-certified staff members.

Officials/Administrators. The full-time equivalent number of persons having district-wide administrative responsibility such as superintendents, assistant superintendents and school administrators such as principals and assistant principals.

Revenues. Additions to assets of LEA's that do not: (1) increase any liability; (2) represent the recovery of a prior expenditure; or, (3) represent the cancellation of certain liabilities without a corresponding increase in other liabilities or a decrease in assets.

Local Sources. Amounts raised by taxation and other means from within the boundaries of the local school districts.

Intermediate Sources. Amounts raised by minor civil divisions of the State such as counties and returned to local school districts on a formula or other basis in amounts that differ from the amounts collected in each local school district.

State Sources. Funds received by local school districts from State government agencies in the form of grants-in-aid.

Federal Sources. Funds received by local school districts from Federal agencies in the form of grants-in-aid, either directly or through State agencies.

Current Expenditures. Expenditures made during the current year to provide direct educational and support services. Current expenditures do not include outlays for debt service, expenditures for the acquisition or construction of buildings or purchase of equipment, or expenditures for community services provided by local school districts.

Instruction. Expenditures for salaries of instructional personnel and other costs of instructional services such as instructional supplies and materials.

Support Services. Expenditures for administrative, technical, and logistic support to facilitate and enhance instruction. Expenditures for pupil support, staff support, transportation, administration, plant operation and maintenance, and other support services are included in this category.

Noninstructional Services. Net expenditures for enterprise types of activities in which revenues produced by the activity partially cover the expenses of the activity. Net expenditures for food services and student body activities are included in this category.

Employee Benefits. Current expenditures, included within the functions listed above, that represent employer contributions to employee retirement systems and insurance plans, workman's compensation, and other benefits for employees.

Pupil/Teacher Ratio. Fall membership divided by the full-time equivalent number of classroom teachers.

Revenue per Pupil. Revenue divided by average daily attendance.

Current Expenditure per Pupil. Current expenditures divided by average daily attendance.

Employee Benefits per Employee. Expenditures for employee benefits divided by the full-time equivalent number of employees.

Summary of 1982 — 83 Data

United States

1980 Census of Population and Housing Data (April 1980)	
Population (in thousands)	226,546
Percent urban	73.7
Percent non-white	16.6
Percent born in State	63.9
Percent 5 to 17 years old	20.9
Persons 25 years and over (in thousands)	132,836
Percent with 12 years or more school completed	66.5
Percent with 16 years or more school completed	16.2
Households (in thousands)	80,390
Families (in thousands)	58,882
Female householder, no husband present (in thousands)	8,409
Median family income	19,917
Percent families below poverty	9.6
[1]Percent children under 18 years old below poverty	16.0

Institutional Data	Number
Number of school districts	15,829
Number of schools	84,740

Pupil Data	Number
Fall 1982 membership	39,651,837
Grades through grade 8	27,155,903
Grades 9 through 12	12,495,934
Average daily attendance (1982-83)	36,664,965
High school graduates (1982-83)	2,599,762

Staff Data (fall 1982)	F.T.E.
Total employed	3,926,600
Instructional Staff	2,406,456
Classroom teachers	2,120,805
Support Staff	1,520,144
Administrators	183,826
